(54) Title: METHOD FOR DISTRIBUTING MAIL

(57) Abstract

A method of sending mail by means of electronic mail, wherein a sender (1) supplies information as to the mail volume to be sent, such as addressees (3) and mail contents, on data media to a receiver (2) who shall send the mail to the addressees. The invention is characterized by feeding the contents of said data media into a computer system (4) in which the addressees (3) are compared with a register that includes information as to whether or not respective addressees (3) have an electronic mail address; causing the computer system (4) to send the mail items concerned by electronic mail to addressees that have an electronic mail address; causing the computer system (4) to sort out as physical mail (6) remaining addressees to which mail items shall be sent; and upon expiration of a predetermined time period from when unanswered electronic mail was sent causing the computer system (4) to sort out such addressees (3) for the purpose of sending a mail item by physical mail.
